Welcome

President Jay Stearns welcomed everyone and said that club member Greg Merrell was doing the program on using the metric system in the shop. He also said that elections would be coming up in March and anyone interested in taking over a position should let him or Steve know.

Jay said this is his 5th and last year as president and thanked Vice President Steve Yauch who he said has been a really good guide for him and takes care of a lot of groundwork. He added that he always appreciates everyone that has volunteered in the past and worked as different officers and committee or committee chairs.

Membership Chairperson Camille Watanabe is working on a membership directory that will be available to members only. We'd like to include pictures and need to set a time to take them.

The Bead of Courage box build challenge will be in February. Bodie will bring beads to add to your box at \$3.00 each. The beads are not required.

Bodie showed a video about the Beads of Courage program that provided details many club members were unaware of. Because there are beads of so many different colors, Bodie suggested you incorporate dividers and even a tray with dividers for the kids to separate their beads. Bodie said a child will receive a bead for hospital stay, blood transfusion, X-rays, doctor visits, loss of hair, and any other procedure that they have.

Announcements

Mike? has Baltic birch plywood pieces for sale ranging from \$12-\$20. Most are 60" in length and widths are 15", 11" and 9". He also has 50 bd. ft. of Zebrawood for \$500.

Kelly Geer said Urban Tree Merchants is doing their open house on Saturday January 28th. See end of newsletter for photos.

Gary Turman reviewed the raffle prizes for this meeting. Gary also asked if anyone was interested in obtaining a 2' x 3' decimal equivalent chart. He has to buy 20 to get the price down to \$12 each.

Guests

Phillip Weber from Allen found NTWA on Facebook. Likes to build Stickley's Green & Green furniture with mahogany. Phillip is also a beekeeper.

Mark Johnson also found NTWA on Facebook and has been on our email list for some time. He first started in

his father's shop when he was 5 years old. Walnut and mahogany are his favorite woods.

Jim Conine discovered NTWA on Facebook and wants to do more woodworking. He's from Dallas and likes Kyia (sp) wood.

Greg Istep looked on the internet to find NTWA. He lives in Richardson and has been woodworking for about a year. His favorite wood is Bolivian Rosewood.

Donald Green came in from Aubrey at the recommendation of Bodie Pyndus. His grandfather got him started in woodworking and he does it fulltime. His favorite wood is Australian cypress.

Randy Deschenes like cherry and maple and found us through an internet search.

Dan Jarboe lives in the Colony and is a friend of Bill Jacobs. He has an old Shopsmith and likes any wood in the scrap pile.

Show & Tell

Jay Stearns made this plaque out of a slice of mesquite.

<u>Program</u>

Club member Greg Merrell says he got started using metric in his shop doing bookshelves in his office and didn't like the 1" spacing for the shelf pin holes. The shelves were either too close or too far apart for his liking. The standard spacing using metric is 32mm which is a little over 1 1/4". Greg said he was disappointed that Sketchup won't let you mix dimensions.

Greg used several resources in his quest to move to metric and took advantage of the European system called Truth 32. He shared these two links from Blum and Festool:

BUS0126 Process32.mcd (woodweb.com)

<u>The 32mm System and the Festool Hole Guide</u> (festoolusa.com)

To follow these standards you need a 5mm self-centering bit, available from both Rockler and Woodcraft, and a 5mm router bit, but this bit has an 8mm shank so you'll need an adaptor for your router of an 8mm collet.

Other tools you probably have to purchase are calipers (digital or analog), tape measure, combination square and bench squares. Some digital calipers can switch between metric and fractions.

Woodpecker has a variety of tools that are metric including T-square, carpenter squares, saddle squares and setup blocks.

Other vendors are:

Fastcap – measuring tapes Lee Valley – especially 20mm stuff Starrett – rulers/combo squares Wixey - calipers Woodhaven - 782/4 32mm template Woodpecker – SPT2 (inch and 32mm)

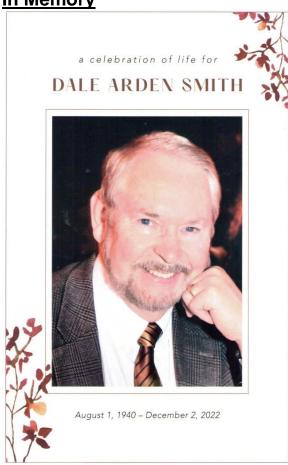

Festool has a complete 32mm system, but it is very expensive.

Greg admitted that he is only halfway converted, he still uses his abundance of screws and nuts and bolts that are empirical. He's trying to find metric woodscrews. So, he's still drilling holes based on English hardware. So that's one thing where I

only went halfway. As far as measurements go the one thing he really likes is finding the middle of something. Splitting stuff up is more straightforward. The I found myself keep referring back to three quarters.

Another great program! Thank you Greg!!

<u>Urban Tree Merchants Open</u> <u>House</u>

Kelly and Kaleb Geer welcomed everyone to their new place of business moving from their backyard to 2205 W. Division St., Ste C-3, Arlington, Tx 76012. Their sawmill has been relocated to a site in Louisville where they have more room to handle the volume they are doing.

In addition to giveaways, food, beers, yard games, shop tours, there were lots of slabs to check out!

Kelly Geer with just a sample of the slabs they offer.
